

Leaders in sustainable modular living

The Pass

The Pass is the perfect option for anyone looking to maximise their usable living space...whether it's for a family member, rental space or home office. It's 8m long by either 3.5m or 4.5m wide and has been engineered and designed to pack a punch in terms of usability and space with a variety of internal layout options.

This versatility allows you to maximise your own living or working space or even maximise your property's income potential. It is built to the highest standards using Australian products right here in our factory on the sunny Gold Coast.

Usability

Our customisable floor plans allow us to build your Pod to suit a variety of requirements. Whether you are looking for an open plan home office, music or gaming room, or a functional additional living space complete with kitchen and powder room, we can provide you with multiple plan options to cater for your needs.

There is also the option to add a highly functional entrance deck and awning to every Pod to increase your living space and help you enjoy more of the outdoors.

These come in customisable sizes, and can wrap around the side of the Pod for even more outdoor space. Not to mention, you can add an outdoor shower on there too.

Layout Options

- Open Plan
- Pod + Powder
- Pod + Kitchen
- Pod + Kitchen + Powder
- Pod + Bath
- Pod + Kitchen + Bath

Components

All of our architecturally designed Pods are complete upon delivery, making them a fuss-free turnkey solution, and use 95% Australian products, placing a huge environmental focus on sustainability.

Our Pods are built for quality, comfort and energy efficiency, which means they require very little energy to achieve comfortable temperature all year round.

We are able to offer this standard without detriment to your health and wellbeing by using building products that are VOC Free, ensuring the air quality inside your Pod remains consistently high.

Galvanised steel frames are welded together to create the base skeleton of each Pod. Accuracy at this stage ensures the Pod is built perfectly square and level.

Colorbond: Bluescope steel exterior cladding, provides maximum durability and corrosion resistance even in the harshest Australian conditions.

Powder coated aluminium window frames provide a quality finish for our signature grey tinted, 22mm double glazed windows and doors which achieve a U value of 3.2 and 0.38 SHGC value.

Energy efficient elements throughout the Pod are perfect for off grid living.

Daikin provides us with energy efficient air conditioning systems. The aesthetic, compact design of the Zena split system offers built-in WiFi connectivity, so you can control your temperature from a smartphone no matter where you are.

4 and 5 star Wels rated plumbing systems are perfect for off grid where water is scarce. This is provided at the highest level of luxury through Sussex Taps custom tapware, available in your Pod in LUXPVD and Living finishes

High performance 50mm PIR insulation encapsulates the entire Pod without thermal bridges. This achieves an R value of 2.2 and supports the Passive House standards that we aim for.

All paints, coatings, sealants, adhesives, glues used are Low or VOC Free, asbestos, isocyanate free and non-toxic.

Electrical cables and plumbing pipes are Australian made, and the hoop pine wall lining is FSC sourced.

Kitchen

- 20mm engineered stone benchtops with waterfall edge
- 20mm engineered stone splash back
- Oliveri stainless steel single bowl sink
- Sussex Taps gooseneck mixer in LUXPVD and Living Range colours
